

Capital budgeting made easy!

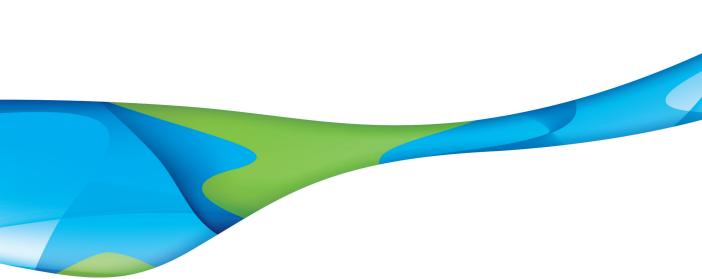

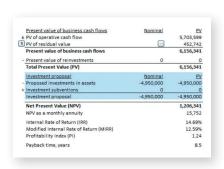

About DataPartner

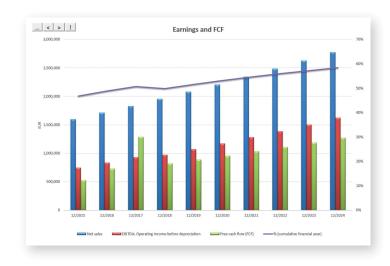

DataPartner is a leading provider of software solutions for capital budgeting, financial modeling and valuation, while also providing consulting services and training programs in these areas. We were founded in 1987 and today our solutions are used worldwide by organizations of all sizes and representing diverse industries – including multinational corporations and small to medium sized enterprises.

We help to develop consistent cash flow models, with the ultimate goal to enable confident decisions regarding capital deployment.

Our solutions are used in many areas – investment appraisals, business planning, project feasibility studies and any kind of situation that requires profitability analysis. The broad spectrum of our Customers illustrates our ability to address specific requirements in capital budgeting processes in a universal way.

We strive to ensure that our solutions incorporate best practices whilst also meeting individual requirements in modeling any type of business.

Our solutions are designed to support corporate governance and compliance, speed

up cash flow modeling, and provide a reliable basis for strategic decisions regarding capital expenditures that help our Customers achieve their goals.

DataPartner is a certified Microsoft Partner.

About Invest for Excel®

DataPartner's software solution for capital budgeting, Invest for Excel®, is used as the corporate standard at over 1 600 organizations in more than 50 countries worldwide. The software applies the time value of money concept and returns profitability measures based on discounted cash flows.

Invest for Excel® is programmed in Microsoft Excel, the most popular spreadsheet for financial modeling, which provides users with a large degree of flexibility and familiarity in creating their calculations.

It helps management, business consultants, finance professionals, investment analysts and controllers in developing cash flow models, but its use is not limited to these areas. Production personnel, marketing managers, or project coordinators can be easily involved in the investment calculations as the program guides users through the process step by step.

Invest for Excel® has a wide range of reports, financial statements and features for what-if analysis, comparisons, consolidations and more, which makes it a powerful yet still simple to use tool. More importantly, it introduces a calculation standard that enhances confidence in analysis and enables selection of the optimum investment alternative.

Invest for Excel® provides the answer as to whether the investment idea, business plan or project is worth pursuing!

The flexibility of Invest for Excel® enables easy modeling of any type of business

Large organizations can streamline the analytical process leading to investment decisions. Invest for Excel® can be used in various departments to develop competent cash flow modeling without limiting it to finance and investment professionals.

Small and medium-sized companies can plan investments more efficiently through quick, reliable and transparent calculations.

Investors can get a clearer view on the profitability and risks of business opportunities.

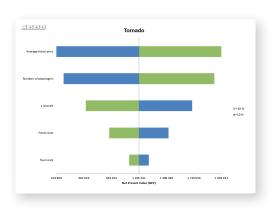

To the public sector, Invest for Excel® is a long-awaited tool for creating investment proposals and subvention applications that are in line with required guidelines.

Key functions

Invest for Excel® is capable of instantly performing complex analysis across a broad range of areas. Benefit from ready-to-go, "on click" functionality:

- Profitability analysis
- Comparison tables
- Consolidation
- Margin calculation
- ▶ Break-even function
- Investment proposal
- Sensitivity analysis
- Financial statements (Income statement, Cash flow statement, Balance sheet)
- ▶ IFRS reports

Benefits of Invest for Excel®

Step-by-step guidance to creating investment calculations

Take advantage of Invest for Excel® and reach key results faster! Evaluate profitability; compare various investment scenarios or alternative projects. Conduct sensitivity analysis – what if investment expenditures increase, income falls, or the discount rate changes? Calculate the break-even for various parameters and find out what is the marginal effect of the investment relative to the initial scenario. Finally, model financing options and prepare an investment proposal.

Corporate compliance

Invest for Excel® adds significant value to corporate compliance by allowing personnel to conform to a clearly defined specification or policy. The result of an Invest for Excel® implementation is the unification of investment profitability analysis. You will create an effective investment process that allows the selection of the best projects for realization.

Best practices and knowledge in financial modeling assured

Users are not required to possess in-depth knowledge of spreadsheets or calculating financial indicators – such know-how is already incorporated into Invest for Excel®. The co-operation between finance professionals and engineers is improved, and the process of reviewing investment requests is a lot easier for decision makers.

Confidence from correct formulas

The result formulas in Invest for Excel® are protected from modification, increasing the security of your calculations.

Flexibility in modeling of any type of business

The software is standardized, but you can tailor the model to suit any type of business or requirements.

Quick and cost-free implementation

Just install Invest for Excel® on a workstation or a network server and it is ready to use! As Invest for Excel® is programmed in the Microsoft Excel environment, it is fast to learn. You can use it as a standalone solution or combine it with other Excel calculations.

Professional reporting

Invest for Excel® provides a range of financial reports and statements – from profitability analysis to reports in line with international accounting standards.

► Help desk support and training programs

Training programs, user support, and software updates are included in the basic maintenance services, providing Invest for Excel® users with high-quality assistance in their capital budgeting activities.
